Thu, 30 Oct at 2:01PM

Dear **Tarush Chauhan**,

Congratulations!

We are pleased to inform you that your paper id **ITIDS2025665** titled **Secure Cloud file sharing system** has been **accepted** for presentation and inclusion in the proceedings of the **11th International Conference on Information Technologies for Intelligent Decision Support (ITIDS-2025)**. The conference, jointly organized by **Ufa University (Russia)**, **Vaal University of Technology (South Africa)**, and **Chandigarh University (India)**, will be held from **11th to 13th November 2025** in hybrid mode.

Please note that **final acceptance** is subject to successful **registration** and **submission of the camera-ready version** of your paper. Publication in **Journal/Proceedings/Edited Books** and indexing will depend on the independent review process by them and comments resolved by the author/s.

Camera-Ready Submission

Please submit the final camera-ready version of your paper **by 5th November 2025**, following the attached formatting guidelines.

Ensure that all **reviewer comments** have been thoroughly addressed before submission.

Reviewer Comments:

- The abstract should include quantitative performance results such as upload/download speeds and encryption overhead to strengthen the research depth.
- There are minor formatting inconsistencies (e.g., “Drop- box” should be corrected to “Dropbox”).
- The paper lacks citations supporting statements about the risks in centralized cloud architectures and provider key control.
- The novelty of the proposed approach should be more explicitly highlighted—clearly stating how it differs from existing secure storage solutions.
- Figures and diagrams are referenced but not adequately described or formatted according to IEEE standards.
- The paper does not discuss metadata security measures, which are essential since metadata can reveal information even when data chunks are encrypted.
- There is repetition in the Implementation section, including duplicated headings and workflow figures.

- The key management process is not described, which is a critical aspect of any cryptographic system.
- The study lacks a discussion on latency overhead introduced by encryption and data chunking processes.
- The experimental evaluation is limited to smaller test files (up to 50 MB), reducing the generalizability of performance results.
- There is no quantitative comparison with baseline systems (such as direct Amazon S3 uploads).
- The discussion section is mostly descriptive and would benefit from deeper analytical reasoning and interpretation of the results.
- Figures, such as Figure 6, require higher resolution, proper labeling, and standardized captions.
- The conclusion restates findings but does not sufficiently emphasize the broader significance, practical implications, or overall contribution of the study.
- The title of the research paper should be changed.

Registration Details

To confirm inclusion of your paper in the **final conference program and proceedings**, at least one author must complete registration **by 5th November 2025**.

- **Registration Fee:** INR 6000
- **Registration Link:** <https://www.cuchd.in/conference/itids-25/>

Note: The registration fee covers presentation and certification (both hard and soft copies). There are **no additional publication charges**.

After completing registration, please **upload the payment receipt** along with the **final (PDF) version** of your paper using the following link:
